

## **Business Industry Leadership Team (BILT)**

Artificial Intelligence KSAs March 2025

This prioritized Knowledge, Skills, and Abilities (KSA) list was developed by the National IT Innovation Center (NITIC) in collaboration with IT industry subject matter experts (SMEs). This list is intended to help faculty and administrators align curriculum with industry needs so graduates are "workforce ready" when they graduate.

SMEs convened online to rank each KSA item one by one – a ranking of "4" meant that item was essential for entry-level IT workers, while a "1" meant that item could be removed from program curriculum. By default, items with an average vote of 2.6 or lower were turned pink to signal that this item may not be worth keeping.

After the vote, the SMEs discussed the results as a group. This discussion led to some revisions in the KSA descriptions and rankings. Some "pink" items the SMEs together deemed important despite the lower average and were kept, while some "green" items with a higher average the SMEs recommended be removed from the list. Those items can be found at the bottom of each KSA section under "Recommended Removal."

The "To Be Included in the Next Vote" section at the bottom includes items the SMEs suggested that were not included in the original list vote.

This KSA prioritization process is a cornerstone of the successful Business and Industry Leadership Team (BILT) model which puts businesses in a co-leadership role.

Learn more about how the BILT works – and how you can implement it with your own program – by using these resources:

A.I. Knowledge and Skills - updated March 2025

A.i. Knowledge and Skills - updated March 2025	# votes (4 = most important)					
	4	3	2	1	Avg	
Knowledge  Knowledge focuses on the understanding of concepts. It is theoretical and not practical. An individual may have an understanding of a topic or tool or some textbook knowledge of it but have no experience applying it. For example, someone might have read hundreds of articles on health and nutrition, many of them in scientific journals, but that doesn't make that person qualified to dispense advice on nutrition.						
K-1 Knowledge of history and definition of AI.	5	3	2	0	3.30
